Two digital meters with LCD displays and terminal blocks. The meters are white with green and red buttons. The terminal blocks are also white and have several colored wires connected to them.

Two digital meters with LCD displays and terminal blocks, identical to the ones on the left side of the cabinet.

Two large DNT 250A circuit breakers with transparent terminal covers. The covers are silver and show the internal wiring. The breakers are white with a green 'OFF' button and a blue 'ON' button.

Two large DNT 250A circuit breakers with transparent terminal covers, identical to the ones on the left side of the cabinet.

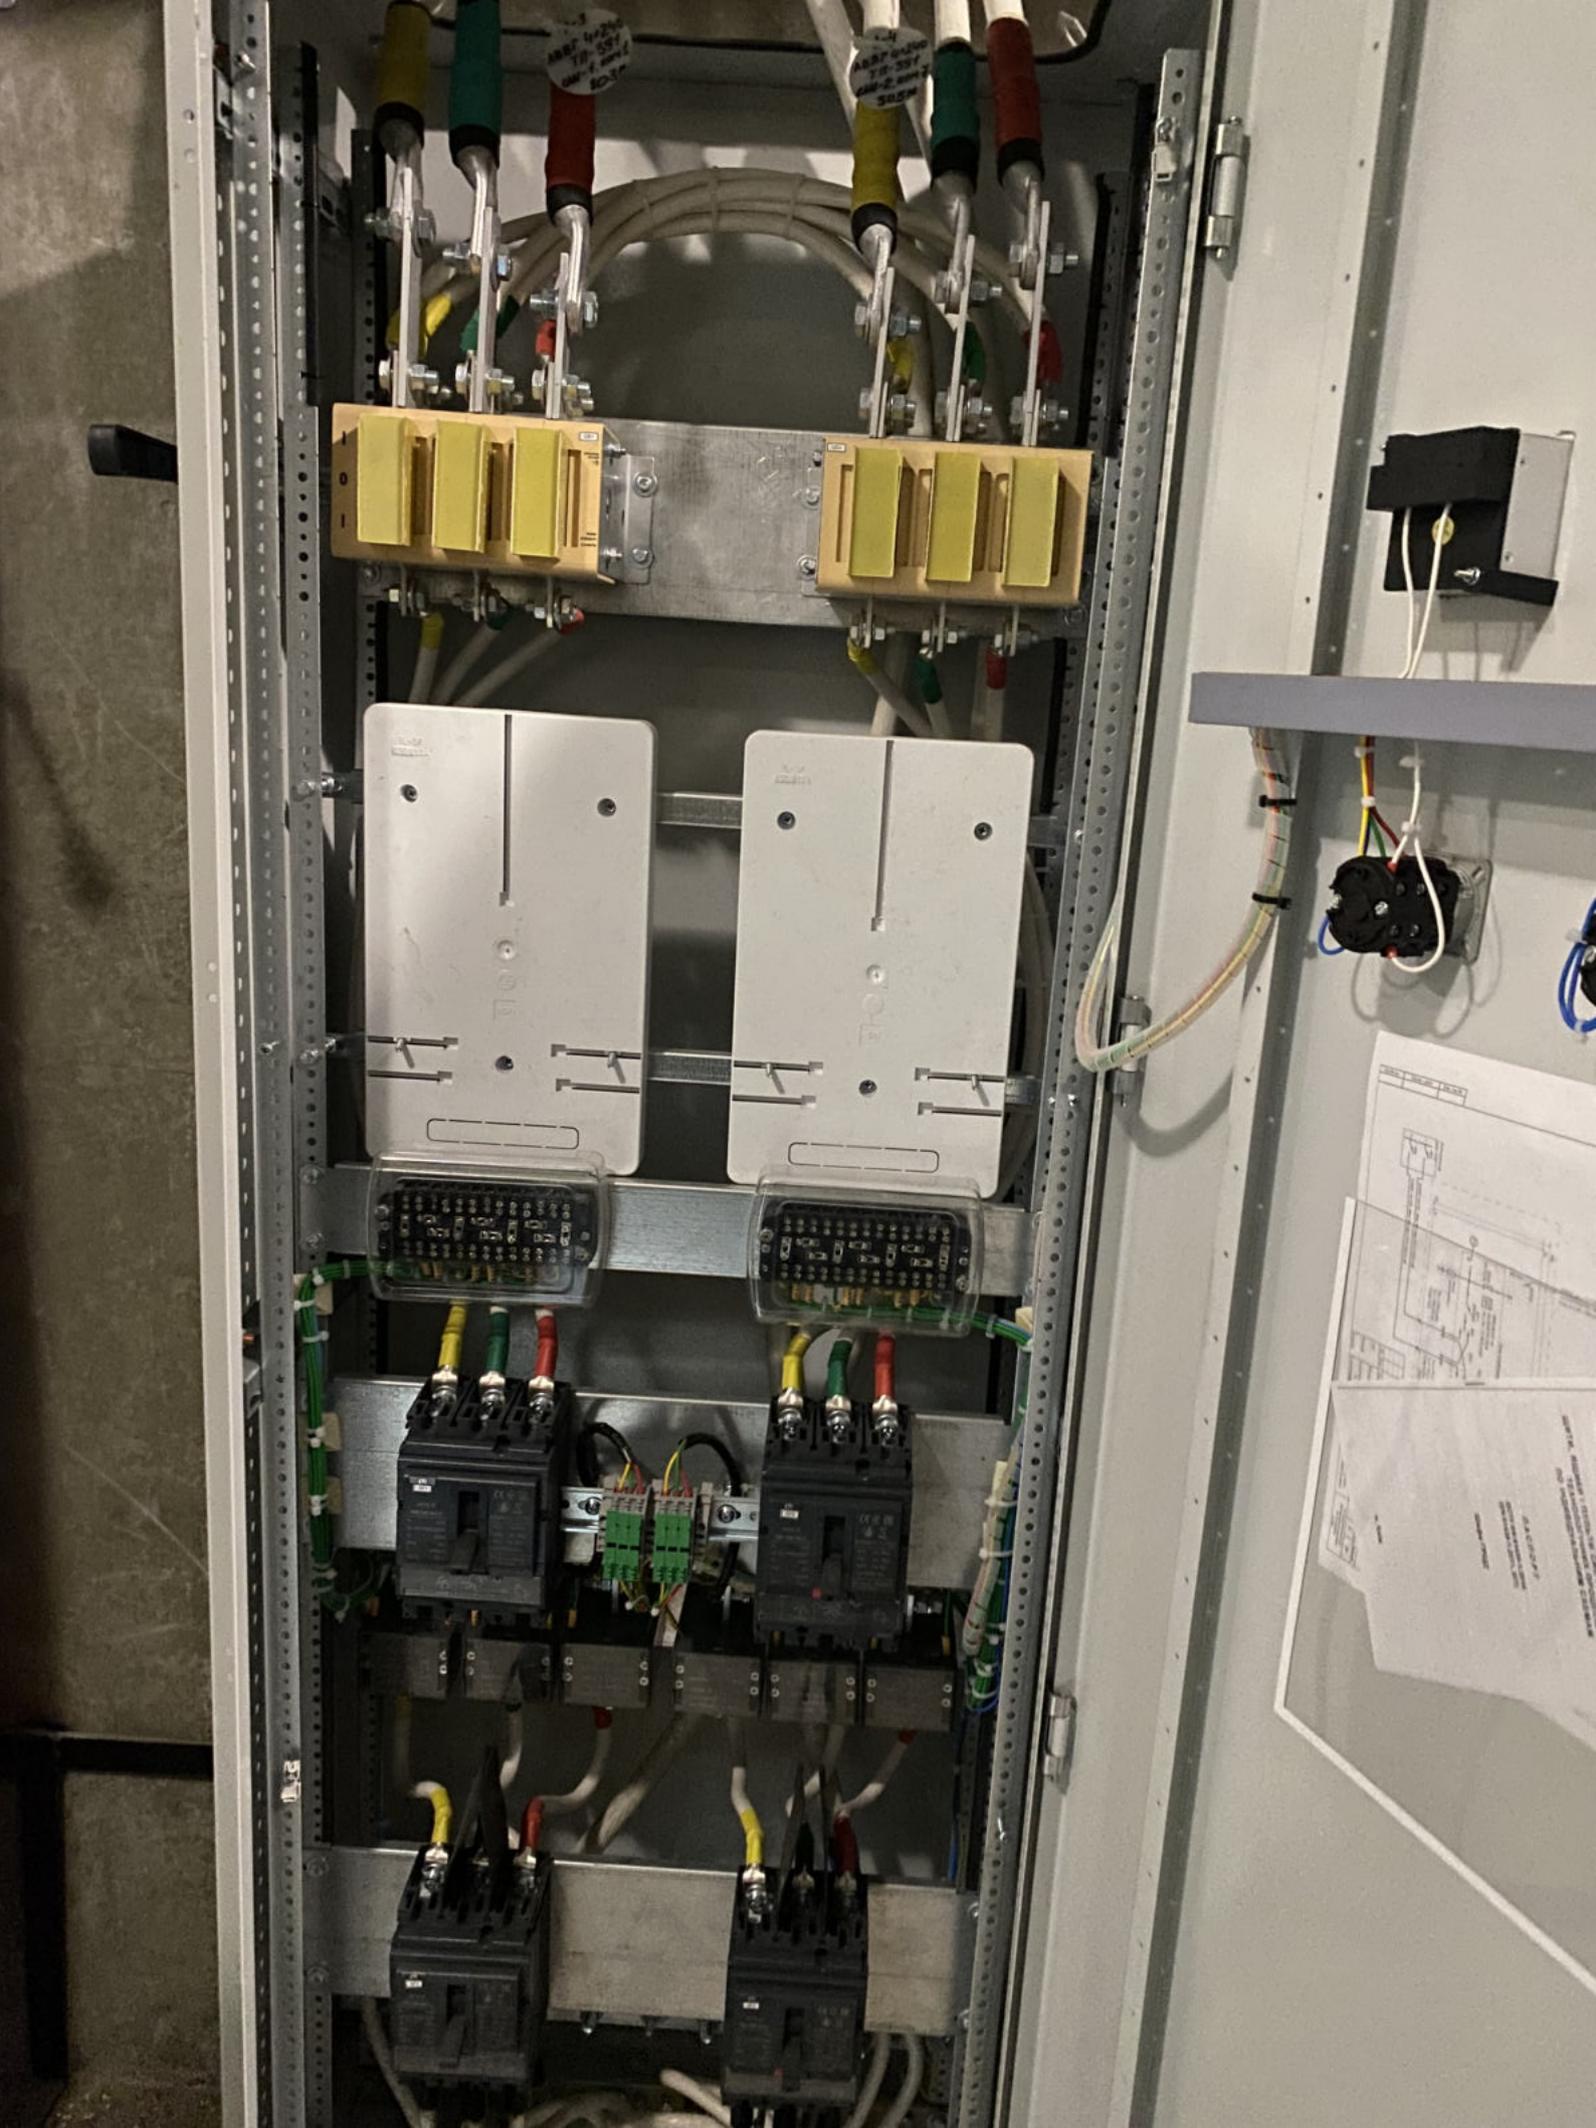

A terminal block with several colored wires connected to it. The wires are yellow, green, and red. The terminal block is white and has several terminals.

A terminal block with several colored wires connected to it, identical to the one on the left side of the cabinet.

A row of four smaller DNT circuit breakers with white covers and black handles. They are mounted on a metal rail. Below them is a terminal block with several white identification labels.

Three DNT circuit breakers are mounted on a metal rail. From left to right, they are labeled "DNT 100", "DNT 100", and "DNT 100". To the right of the breakers is a terminal block with blue and white terminals. Wires of various colors (yellow, black, white, blue) are connected to the breakers and terminal block.

Four digital meters are mounted in two columns. The top-left meter is labeled "DNT 100" and "100A". The top-right meter is labeled "DNT 100" and "100A". The bottom-left meter is labeled "DNT 100" and "100A". The bottom-right meter is labeled "DNT 100" and "100A". Each meter has a digital display and several indicator lights. Wires are connected to the meters.
